Photo: Illustration of heads of state choosing a website designer and working with him to develop a distinctive online presence for your business is an experience that is very similar to the homeowner choosing an interior designer. Not all web designers are equally skilled, and even if you find someone with the necessary technical know-how, it's still important that you speak a similar design language. Once you've found a good fit, there are some common pitfalls that can be avoided by careful planning at the beginning. For basic dos and don'ts on web design, we spoke with Elena Frampton, co-founder of Curator, an interior design company with offices in Kal York and Los Angeles that recently reworked its website. We also caught up with Alex Lin of Studio Lin, a graphics and web design company that has created websites for high-profile designers and companies like Rich Brilliant Willing and Roll & Hill. Come to the table with inspiration. Be specific and clear about your goals and share examples on other websites, not necessarily design-related examples of functionality, says Frampton. You're looking for great homepage features and clear navigation. Draw up a budget that everyone agrees on. The web design team we originally hired gave us a fixed-rate estimate based on our budget, says Frampton. However, additional service charges accumulated quickly. It reminded us of the entrepreneur who presents a good offer, but you are too liberal to change orders. Do not consider what your website will look like on different devices. Our decisions during the web design process have been taken into account for all platforms, says Frampton. Make sure your team understands that you want your site to look good on computers, tablets, and smartphones. Make things easy to find. I often encounter glittering pages where you see that the company has been published, but you can't zoom in on articles that actually read the stories, says Frampton. While people do preview sites quickly, prospective clients and viewers who matter to your lower line tend to do their homework and want access to real information. The same applies to contact information as well. While the Contact form may seem fancy, people are more likely to click on an email address. This information should be easy to find, and easy to follow. Don't let the style get in the way of the material. Avoid overly complicated plans and illogical navigation, says Lin. This only frustrates website visitors. If you have your heart set on a part introduction, complete with music and animation, at least include a skip intro button. Remember: People want to see your work, not a show. I don't think once the site is built, it's done. You'll need a plan to update your site after launch. Ask who maintains the websites that web designers have created, says Lin. We want a web designer and programming team that understands the importance of a good content management system to what we do creation is easy to use. The content management system must be one that you can easily update, edit, and upload content. Don't underestimate how useful your site can be. Sites can be more than just an opportunity to display work, lin says. They can be used as archiving or presentation tools. Try tagging categories clearly and creating a virtual accounting system that you and your colleagues can refer back to. You can also store high-resolution images as presses and start a blog to increase engagement. This content was created and maintained by a third party and imported to this page to help users enter their email addresses. You may be able to find more information about this and similar content piano.io on Larry Amon Turnkey websites that are constantly growing in popularity and you may be wondering exactly what a turnkey website is and how it benefits. Turnkey in business has always meant a business that you can start immediately just turning the key and starting. Turnkey websites follow the same concept, but the key is to understand them how and why they work. A turnkey website is a fully functional website where everything you need to run an already fully functional website. This includes important items like domain names, website hosting, scripts and shopping cart systems. Turnkey websites cost as low as a few hundred dollars or can easily reach many thousands, depending on the complexity and domain name recognition. The average cost is less than a thousand dollars and includes one or more months of hosting. After that, you will have to pay for your hosting. Turnkey websites are becoming more popular because the internet is becoming much more commercial and there are many people who want to work from home. A turnkey website is an easy and quick way to start a home business. Turnkey websites are defined as easy to use at the beginning. To further update your site and make changes, you need a moderate level of technical web editing skills for the owner or person added to the task. Turnkey websites are often sold by companies who turn out dozens or hundreds of sites. They can do this because of their design and web skills to build a page quickly and have access to web templates that have been designed and because they resell hosting profits after the website is purchased. \*\*\* Point2Homes offers Point2Agent to real estate agents. The service allows real estate agents to set up mobile-friendly websites with blogs and social sharing options. The product also includes e-mail newsletter creation tools that help agents grow their business. If you're a real estate agent, think of it as a comprehensive back office tech-ing twenty-year-olds. Visit point2agent's website and you will see the beauty of the product that allows real estate agents to create full service websites to market online advertising and services. Agents pay as little as \$19.90 a month to get as much as \$129.90 a month from bundles of marketing tools that include personalized email addresses, researching tools, website analysis, and simple WordPress blog setup. Agents can also include lists on their Point2Agent websites and include additional photos and details of homes, and then distribute listings to a wide online audience through Point2Agent's customized Facebook app. Templates are a website, blog, and newsletter that can be easily customized to suit your needs. Blogs that can be integrated into your existing website with a wider range of web reach. The available stock market syndication for high-traffic websites like Zillow and Yahoo! Homes. Virtual tour offerings so buyers can see the property virtually firsthand. Search engine optimization that improves web rankings. Mortgage calculators have to take out the worry about maths. Available lead capture forms. Templates are available with a variety of customization options to personalize your business. A professional level blogging platform for blogging for beginners or available on multiple blogs that can be incorporated into your website. Brochures and presentations that are easy to set up, easy to set up and convert into high-quality PDF brochures. Free advertising list. List syndication can be inconsistent. Customizing your blog is limited to the WordPress platform. The company's real estate solutions are of significant value to most real estate agents. In particular, the easy-to-set blog on the WordPress platform is something most real estate agents can take advantage of in today's digital world. Of course, your blog is only listed on a professional level offering that costs \$54.90/month, but it's worth it if you want to expand your reach. Sharing regular blog posts is an excellent way to engage with people and drive your website to a higher page ranking when it comes to search engine results. Syndicating lists are an absolute requirement in today's internet-intensive real estate search environment. The company has a long list of websites that have syndicated listings and is considered the largest real estate listing syndication network available today. If you find some sites don't list homes in your area (especially if it's remote), consider that your data feed is just that. Which means you should get the same syndicate in Taos, New Mexico, as a real estate agent in New York. In the end, if you have a template-based website solution for your marketing plans, Point2Agent certainly deserves careful investigation. Q: My business is very small, only me and two employees, and our product is really not available for sale online. Do I really need a website? A: That's a good question. Actually one of the most important and frequently asked questions in the digital business age. Before I answer, however, I would like to answer, flash back to the very first time I was asked this question. It was around 1998, in the early years of the internet. I gave a speech on the impact of the Internet on small businesses at an association luncheon in Montgomery, Alabama. Back in 1998, which was decades ago in the Internet years, the future of e-commerce was anyone's guess, but even the most negative futurists agreed that all indications are that the bulk of future business revenue will come from online transactions or offline transactions that will result in online marketing efforts. So you need to venture into a website, even if your business is small and sells products or services you don't think can be sold online? My answer in 1998 is the same as my answer today: Yes, if you have a business, you must have a website. Period. There's no question about that. Without a doubt. Also, don't be as quick to dismiss your product as the one that can't be sold online. Nowadays, there is very little that can not be sold over the Internet. More than 20 million buyers are now online, purchasing everything from books from computers to cars to real estate to jet planes with natural gas, whatever you want. If you can imagine someone will figure out how to sell online. Let me clarify one point: I'm not saying that you should make every effort to sell goods over the Internet, although if your product is suitable for easy online sales, you are certainly considering it. The bottom line here is that you need at least one presence on the Internet that customers, potential employees, business partners and perhaps even investors can quickly and easily learn more about your business and the products or services you have to offer. That said, it's not enough to just have a website. It should be a professional looking site if you want to be taken seriously. Since many consumers are now looking for information online before purchasing a brick-and-mortar store, your site may have the first chance of making a good impression on a potential buyer. If your site looks like it was designed for a barrel of color-only monkeys, the chances are that a good first impression will be lost. One of the great things about the internet is that it leveled the playing field when it comes to competing with the big boys. As mentioned above, there is a shot to make a good first impression. In a well-designed site, the small operation of the project is the image and professionalism of a much larger company. The inverse is also true. I've seen many great company websites that are so poorly designed and difficult to navigate that they completely lacked professionalism and authenticity. Good for you, too bad for them. It also mentions that yours is a small operation, but when it comes to taking advantage of the website, size doesn't matter. I don't care if you're a one-man or a corporate giant with 10,000 employees; if you don't have a website, you can do business. Not. Here's the exception to my rule: It's actually better to have no website at all than to make one that makes your business look bad. The site talks volumes about your business. Either he says, Hey, look, we take the business so seriously that we've created this amazing site for our clients!, or it screams, Hey, look, I let my 10-year-old nephew design my site. Good luck searching. Your website is an important part of your business. Make sure you treat it that way. Tim W. Knox is the founder, president and CEO of four successful technology companies: B2Secure Inc., a web-based hiring management software company; Digital Graphiti Inc., software development company; and SideBar Systems, a company that creates cutting-edge convergence software for broadcasting media outlets; and online profits 4U, an e-business dedicated to helping online entrepreneurs start and thrive in an online, wholesale or drop-ship business.
